Extracted human teeth (1) (2)	Min. 8 pcs

(1) Extracted teeth should be stored in a jar with 1% sodium hypochlorite (bleach) solution. The solution must be renewed weekly. Once cleaned of blood and tissue residues, teeth can be stored in distilled water.

(2) At least 8 human teeth, including one lower and one upper incisor, one lower and one upper premolar, and one lower and one upper molar. The teeth should have as little decay as possible, and the root apices should be intact (not fractured)..
