CHIEF COORDINATOR
COORDINATOR
VICE COORDINATORS

: Prof. Dr. Özlem SARIKAYA
: Assist. Prof. Dr. Aslı KARACAN KONRAT
: Res. Assist. Halil Şaban ERKARTAL- Res. Assist. Işıl BİLGİN

COMMITTEE LEARNING OUTCOMES

1. Explains the neurogenetic, cognitive, psychological, and sociocultural components of human behavior in behavioral sciences.
2. Explains the development of scientific knowledge and the interdisciplinary nature of biophysics.
3. Relates the physical and chemical properties of water and biomolecules, molecular bonds and interactions, and changes in movement and charge in aqueous environments to the functioning of living systems and biological diversity.
4. Applies the systems approach to solving biological problems.
5. Recognizes the importance of biostatistics in health and medical sciences, classifies data, and summarizes findings using measures of central tendency.
6. Evaluates commonly used types of microscopes in histological research, intracellular organelles, and cell-extracellular matrix interactions; identifies microscope components and distinguishes different cell types under the microscope.
7. Distinguishes basic cell and tissue samples based on their microscopic characteristics.
8. Relates the fundamental principles of biochemistry to medical applications and recognizes its role in health sciences.
9. Recognizes safety rules in the biochemistry laboratory and uses basic laboratory glassware and plasticware appropriately.
10. Prepares solutions and performs applications involving acids, bases, and buffers.
11. Performs general identification reactions for carbohydrates and interprets the results.
12. Explains cellular organization, including the structure and functions of the cell membrane, cytoskeleton, and organelles.
13. Compares prokaryotic and eukaryotic cells.
14. Explains the structure of nucleic acids and the processes of replication, transcription, and post-transcriptional regulation of genetic information.
15. Recognizes laboratory biosafety rules and identifies basic laboratory equipment.
16. Uses a micropipette correctly and safely.
17. Lists the basic steps of genomic and bacterial DNA isolation and explains the underlying principles of these procedures.
18. Explains the concepts of ethics, morality, law, and medical ethics.
19. Explains the historical development of medical ethics and discusses the values of the medical profession and the components of professional physician identity.
20. Defines the principles of autonomy, beneficence, non-maleficence, and justice.
21. Explains fundamental bioethical principles in clinical cases and situations and evaluates different values and perspectives in ethical decision-making processes.
22. Uses fundamental communication skills when communicating with patients and healthcare professionals.
23. Systematically evaluates an individual's general condition and accurately and safely measures basic vital signs, including body temperature, pulse, and respiratory rate.
24. Performs surgical handwashing correctly and in the proper sequence.
25. Puts on and removes sterile gloves in accordance with aseptic principles.
26. Identifies appropriate scientific and digital resources for accessing evidence-based information and uses them in multidisciplinary student panel activities.
27. Explains the applications, opportunities, and limitations of artificial intelligence in medicine and medical education, and discusses ethical issues related to AI use, including privacy, data security, bias, transparency, and accountability.
28. Evaluates expectations from medical education and personal responsibility for learning, and discusses the roles of students, faculty members, and institutions in medical education.
