COMMITTEE LEARNING OUTCOMES

Students;

1. Describe the divisions of the central nervous system, the structure of the spinal cord, ascending and descending pathways, the brainstem and its parts; medulla oblongata, pons, mesencephalon, diencephalon, hypothalamus, pituitary gland, basal ganglia, thalamus, cerebral hemispheres, cerebral cortex, brain ventricles, cerebrospinal fluid, blood vessels of the central nervous system, olfactory pathways, limbic system, rhinencephalon, cranial nerves, the eye, visual pathways, the ear and vestibular system, auditory pathways and auditory system.
2. Examine and describe the histological structure of neurons and glial cell types in the central and peripheral nervous systems, the development of these organs, the histological structure of the meninges, the blood-brain barrier, and the histology and embryology of the skin and sensory organs.
3. Relate the structural components of central nervous system cells, transport across the blood-brain barrier, and the biochemical properties of cerebrospinal fluid.
4. Explain the structural properties of ion channels involved in neurotransmission, the pathways of neurotransmitter synthesis and degradation, and the chemical processes involved in vision, and identifies the fundamental biochemical abnormalities associated with neurological diseases.
5. Describe the general organization of the central and peripheral nervous systems, the senses, learning, memory formation, the limbic system, basal ganglia, spinal cord and reflexes; and to describe the general organization of the peripheral and autonomic nervous system mechanisms.
6. Distinguish the classification, structure and morphology, physiology, bacterial genetics, culture media, stains, sterilization and disinfection, antimicrobial agents, normal microbial flora, as well as host-microbe interactions, acquired immunity, hypersensitivity reactions, and immunological tests of microorganisms.
7. Perform ear, nose, and throat (ENT), head and neck, and eye examinations and demonstrates blood gas sampling, intravenous access, and patient registration skills in accordance with patient safety, aseptic technique, and effective communication principles.
8. Evaluate the developmental and neurobiological basis and clinical features of neural tube defects, hydrocephalus, autism spectrum disorder, and attention deficit, as well as their effects on social
adaptation and learning processes and recent advances in neuroscience, from a multidisciplinary perspective.
