**COMMITTEE LEARNING OBJECTIVES**

This committee encompasses various fields of basic sciences and aims to provide fundamental knowledge and understanding in subjects such as human anatomy, histology, embryology, physiology, medical biochemistry, and medical biology. The purpose of this committee is to enable students to comprehend the structural and functional characteristics of the human body. This includes recognizing anatomical structures, cellular-level structures, tissues, and organ systems. Students are expected to acquire detailed information about different parts of the human body and relate this knowledge to clinical applications.

The committee aims to facilitate understanding of the fundamental physiological processes and regulation of the body. Physiology investigates how organ systems of the body function and maintain homeostasis. It involves learning about the functioning of systems such as respiration, circulation, digestion, and the nervous system, and striving to comprehend how the body maintains its balance.

The committee covers the basic principles of medical biochemistry and medical biology. It teaches how biochemistry operates at the cellular and molecular levels and fulfills functions within the body. Topics of biology and genetics are also addressed, providing students with knowledge on genetic concepts, genome structure and function, and basic aspects of inheritance and related genetic disorders.

WEEK 1					
DATE	HOUR	SUBJECT	LECTURER	CLASSROOM	
5 FEBRUARY 2024 MONDAY	09.00-09.50	ELECTIVE SUBJECT			
	10.00-10.50	ELECTIVE SUBJECT
