İSTANBUL
OKAN ÜNİVERSİTESİ

SUSTAINABLE WATER MANAGEMENT POLICY

Istanbul Okan University aims to manage water resources sustainably, efficiently and responsibly, protecting water, reducing consumption, considering alternative sources and ensuring that wastewater management is safe for human and environmental health. Water management is integrated into educational, research and administrative activities on all campuses and conducted in accordance with national legislation and international principles.

Policy Core Actions;

- Protect water resources and ensure efficient, economical and sustainable water use.
- Develop and expand measures to reduce water consumption.
- Collect, assess and use alternative water resources, particularly rainwater.
- Manage wastewater without harming human health or the environment.
- Comply with applicable legislation, planning documents and technical standards in water management.
- Reduce environmental impacts of water use and develop sustainable campus practices.
- Raise awareness and encourage participation in water conservation and sustainable use among stakeholders.
- Plan, coordinate, monitor and report water management processes.
- Continuously improve water management performance through the PDCA cycle.
